

PROFESSIONAL SUMMARY

Senior Backend Engineer with strong PHP/Symfony experience across marketplace, financial and data-intensive systems. Experienced in business-critical backend platforms, event-driven processing, analytical architectures and database optimization. Takes technical ownership of initiatives by translating product requirements into technical designs, decomposing work, coordinating cross-team dependencies and supporting delivery through testing, CI/CD, observability and incident response.

CORE SKILLS

Backend Development · PHP · Symfony · API Design · REST APIs · Software Architecture · System Design · Distributed Systems · Event-Driven Architecture · Data Processing · Data Pipelines · MySQL · ClickHouse · Kafka · Flink · Elasticsearch · RabbitMQ · Redis · Airbyte · Dagster · Docker · Dockerized Environments · Google Cloud · Grafana · Testing · CI/CD · Incident Response · GitLab · GitHub Actions · GitHub · Jenkins

PROFESSIONAL EXPERIENCE

Backend Software Engineer

METRO Markets GmbH

May 2022 – Present

Marketplace / Seller Account & Offer Management

Seller onboarding · offer management · competitive pricing · marketplace data flows

- Took technical ownership of backend initiatives, translating product requirements into technical designs, decomposing work, coordinating dependencies with Product, Tech Leads and external teams, and contributing hands-on to delivery.
- Built and maintained backend capabilities for seller onboarding, seller account management, offer lifecycle flows, offer storage, customer individual pricing and destination-specific seller behaviour.
- Worked on an end-to-end market-price data flow integrating externally collected pricing information into marketplace systems through orchestration, analytical storage, event-driven processing, search indexing and backend/API consumption.
- Improved competitive pricing data quality and downstream readiness by working on GTIN/product relevance, duplicate handling, ClickHouse datasets, Kafka/Flink processing, Elasticsearch integration and monitoring/reporting flows.
- Collaborated with QA on Cypress tests, presented features through E2E demos, and handled incidents using Grafana, Google Cloud logs/monitoring, incident.io and postmortems.
- Worked in reproducible Dockerized local environments for decoupled services, ensuring features could be tested locally and in pre-production.

SUSA / Financial Reporting

Analytical workloads · MySQL to ClickHouse · Airbyte · Materialized Views

- Owned the technical implementation of a financial-reporting modernization, moving analytical workloads from MySQL to ClickHouse with Airbyte replication and Materialized Views.
- Separated complex reporting workloads from the transactional database, reducing pressure on MySQL and improving scalability and availability of financial reporting data.
- Implemented and validated reporting data for sales, invoices, Amazon-related reporting, vendor liabilities, VAT and consolidated financial views, including investigation of financial discrepancies.
- Created Grafana dashboards and alerts for operational visibility, including Slack notifications and an n8n workflow that transformed alert payloads before routing them to Slack.

Finance / ERP / Admin & Finance

Invoicing · credit notes · VAT/tax · payments · e-invoicing · financial integrations

- Built and maintained backend functionality for invoicing, credit notes, VAT/tax handling, payment flows and e-invoicing across marketplace and finance systems.
- Migrated and extended Amazon finance integrations to Amazon Selling Partner API, configuring token/refresh-token authentication, validating calls through Postman and integrating invoice, credit-note and feed data into persistence.
- Implemented integrations with external financial services and country-specific requirements, including document generation, accounting/reporting flows and marketplace-to-finance data processing.
- Improved reliability of financial document processing through error handling, retries, reprocessing flows and backend services for refund and credit-note generation, supported by automated tests, code reviews and GitLab CI/CD.

Web Developer

Conjurer Services / IKEA

Oct 2021 – Mar 2022

- Contributed to the maintenance and evolution of IKEA's web platform across the Balearic Islands, Canary Islands, Baltic countries and Iceland, delivering bug fixes and incremental features within a small development team.
- Worked within an existing production web platform using PHP, jQuery and SVN-based development workflows.

PHP / Symfony Developer

Tiendeo

Jan 2021 – Aug 2021

- Developed PHP/Symfony crawling and data-extraction scripts for heterogeneous retail websites, handling site-specific HTML, embedded JSON and public API formats.
- Automated scheduled data collection through Jenkins and cron, working around retailer-specific structures and access constraints.

EDUCATION

Vocational Training in Web Development, 2019–2021 — Graduated with Honors.
